The 6th edition of the International Conference on e-Health (part of the IADIS Multi Conference on Computer Science and Information Systems) was held in Lisbon, Portugal, during 17-19 July, 2014.

This conference was organized by the International Association for Development of the Information Society (IADIS).

The EH conference focuses on the notion that the use of ICTs (Information and Communication Technologies) in Healthcare Services is the main mechanism to improve efficiency and effectiveness. This conference tried to draw together information systems, practitioners and management experts from all quadrants involved in developing computer technology to improve healthcare quality. Submissions were accepted under the following 3 main areas in the field of e-health: Research Issues, Management Issues and Applications.

In 2014, the e-health book of proceedings was published jointly with the proceedings of the following conferences: ICT, Society and Human Beings 2014, Web Based Communities and Social Media 2014, e-Commerce 2014, Information Systems Post-implementation and Change Management 2014. All together, these events received 223 submissions from more than 34 countries. Each submission was anonymously reviewed by an average of five independent reviewers, to ensure that accepted submissions were of a high standard. In the end, only 36 full papers were approved which meant an acceptance rate of 16%. A few more papers were accepted as short papers, reflection papers and posters.

Extended versions of the best papers were selected to be published in:

- the IADIS International Journal on WWW/Internet (IJWI). ISSN: 1645-7641

Besides the presentation of full papers, short papers, reflection papers and posters, the conference also included one keynote presentation given by Dr Adel Tawel, King's College London, UK.

Keynote Presentation:
